SUMMARY

Full-stack developer and Computer Science undergraduate with production-grade experience in Node.js, React, Docker, and CI/CD pipelines. Shipped real-world applications to **150+ daily users** on DigitalOcean and AWS with measurable performance gains through system design and microservices architecture. Seeking SDE or DevOps internship roles focused on scalable systems, cloud infrastructure, and backend engineering.

EDUCATION

Sagar Institute of Research and Technology

B.Tech in Computer Science | CGPA: 7.51/10

Bhopal, India

Sep. 2023 – Present

Priyamvada Birla Senior Secondary School

CBSE High School (Science Stream)

Satna, India

Jun. 2021 – Feb. 2023

PROJECTS

Dockerized Turborepo CI/CD Pipeline | GitHub | *Docker, GitHub Actions, Linux, CI/CD, Nginx, PostgreSQL*

- Orchestrated a production-grade **microservices** infrastructure using Dockerized Turborepo with isolated frontend, API, WebSocket, and PostgreSQL services following system design best practices
- Implemented automated **CI/CD pipelines** using GitHub Actions for Docker image builds, Docker Hub publishing, and **cloud deployment** to remote Linux VMs (DigitalOcean Droplets)
- Configured **Nginx** reverse proxy with HTTPS, domain-based routing, container networking, and persistent PostgreSQL volumes for production reliability

LighterPulse | Live | GitHub | *Next.js, TypeScript, Redis, WebSockets, Dune Analytics*

- Deployed a real-time analytics dashboard for Lighter Protocol serving **150+ daily users** with live trading and on-chain insights, applying scalable system design across modular API layers
- Engineered **Redis caching** (Upstash) reducing API calls by **60%+** and achieving sub-2s page load performance
- Integrated multi-exchange APIs (Lighter, Binance, Bybit) for funding rate comparison and arbitrage insights
- Architected microservices-style backend with Next.js App Router, dynamic routing, and decoupled data-fetching layers

WalletX | Live | GitHub | *React, Node.js, Express.js, MongoDB, TypeScript*

- Developed a full-stack digital wallet platform applying system design principles for secure transactions and real-time balance tracking
- Implemented **JWT authentication**, bcrypt hashing, and input validation for secure user and payment flows
- Designed RESTful APIs with transaction handling and **ACID-compliant** operations for financial reliability
- Structured backend using **modular architecture** ensuring maintainability, scalability, and separation of concerns

Lighter Liquidation Tracker | GitHub | *Node.js, WebSockets, Redis, REST API*

- Engineered a real-time liquidation tracking service using **WebSockets** and event-driven architecture to monitor on-chain events across markets
- Built deduplication logic and minute-level aggregation to ensure accurate 24-hour liquidation metrics
- Leveraged Redis with **TTL-based storage** for efficient rolling window data processing and low-latency reads

TECHNICAL SKILLS

Languages: C++, JavaScript, TypeScript, HTML/CSS, SQL (PostgreSQL)

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT Auth, Prisma ORM, Redis, API Design, Postman

Frontend: React, Next.js, Tailwind CSS, Shadcn

Databases: MongoDB, PostgreSQL

DevOps & Cloud: Docker, Docker Compose, GitHub Actions, CI/CD, Nginx, Linux, AWS EC2, DigitalOcean

AI-Assisted Development: Cursor, Claude, ChatGPT, AI-accelerated debugging, code generation

COURSEWORK

- Data Structures and Algorithms, Database Management Systems, Operating Systems, Computer Networks
